

Sparkling LEDs

- Visit <https://projects.raspberrypi.org/en/projects/sense-hat-random-sparkles>
 - a. Complete the project up to “Add a loop”.
 - b. For the advanced challenge: Use the Magnetometer, Accelerometer, or the Gyroscope to “influence” the random sparkling of LEDs. This “influence” may be a change in the pattern, timing or the coloring (say pastel colors as hinted in the website’s “Challenge” page).

For Lab Report/Presentation:

- No written report for this lab.
- Demonstrate/show the sparkling LEDs of your own design.
